PROFILE

I have a strong understanding of building dynamic and responsive user interfaces, integrating APIs, and managing the state of web applications using Redux. Your use of CSS libraries such as Bootstrap and Chakra-ui enables you to create visually appealing and modern designs for your web applications

EDUCATION

September 2022
Alexandria, Egypt

Bachelor's degree in Arabic language
Al-Azhar University

SKILLS

Html 5

Css 3

Bootstrap

Javascript

React.js

git

PROJECTS

STORE SYSTEM

I use in this project Redux for state management, React-Router, Chakra-ui and json server for API

Project features:

- authentication and Permissions for each member Admin or User
- add products according to each section, sell price, buy price, count, and count profit of every piece
- Store section It displays all products according to the specified section with their number, the buying and selling price, and the total profit calculation for the inventory
- Settings section Add, control and modify users and change their Permissions
- Actions section Login, Logout, purchase and modification currencies for each user with the date and hour, and you can make a filter during a certain period

Weather api

It is an application to use Weather API

Weather-App features:

- It does a search for the temperature in cities and countries
- It's support Arabic and English
- You can switch between Celsius and Fahrenheit

Crud Operation System

It is an application to use Redux and React Router

Crud features:

- authentication
- Create, Read, Update, Delete
